## GreenFlame

Woodburning stove with the lowest emission in the world.

Harvia GreenFlame is an ecological woodburning stove. GreenFlame burdens the environment less, as the studies tell that it has 80 % smaller carbon monoxide emissions, 25 % smaller wood consumption and 100 % longer operating life as ordinary woodburning stoves. GreenFlame gives you pleasant sauna bath in an ecological way.

The patented automatic adjustment mechanics of the GreenFlame regulate combustion air into right place at right time. Wood burns longer and cleaner when fire process gets air correctly. The unique airflow of the combustion air makes GreenFlame longlasting stove, because the combustion air cools the stove body. At the same time the combustion air preheats. The stoves large glass door is designed to close automatically.

The size of the sauna room is 8–18 m<sup>3</sup> and the maximum amount of stones is 40 kg. Dimensions 445 x 530 x 800 mm (w x d x h).

The product is patented and tested by VTT Technical Research Centre [Certificate No VTT-C-3710-09].
